

Perfect Hydrolyzed Collagen Molecular Weight Statement

We hereby certify that the collagen used in **Perfect Hydrolyzed Collagen** is hydrolyzed collagen with a typical molecular weight of 5,000 Da as per internal lab testing.

The Brazilian Pasture Raised Bovine Collagen is put through an enzymatic process that creates small, low molecular weight collagen peptides that are easy to absorb and digest. This all natural process results in Hydrolyzed Collagen that has a typical molecular weight of 5,000 Da.
